SHREE SIDDHIVINAYAK FIRE

DESIGN · SUPPLY · INSTALLATION · COMMISSIONING
OF FIRE PROTECTION, DETECTION & SUPPRESSION SYSTEMS

COMPANY PROFILE

NAVI MUMBAI,INDIA

AN INTRODUCTION

Fire protection is not fitting. It is a guarantee.

Fire protection is a fundamental requirement for petrochemical and pharmaceutical plants, storage and tank farms, ports, commercial structures and high-rise developments. Effective fire fighting is a shared responsibility, with every stakeholder having a part to play.

Shree Siddhivinayak Fire Enterprises was established to carry that responsibility for owners, developers and occupiers as a single accountable contractor for the supply, installation and consultation of fire fighting systems.

Managed by trained and technically qualified professionals, our experience spans high-rise residential complexes, hospitals, schools, hotels, industrial units, petrol pumps, warehouses and municipal buildings, with emphasis on quality of output. We undertake turnkey projects — from consultation and design through supply, installation and commissioning, to liaison and Fire Brigade NOC.

With Shree Siddhivinayak Fire - Be Guaranted. Be Safe.

A single contractor, from drawing to NOC.

Most fire systems fail at the joints - between the consultant's drawing, the supplier's material and the site team's execution.We remove those joints by holding all four responsibilities ourselves.

01 — Design & Consultancy

Hydraulic calculations, pump and tank sizing, riser and ring-main layouts, detection zoning and shop drawings for fixed fire fighting and protection systems.

02 — Supply

Supply of all types of fixed fire fighting and protection equipment — pumps, valves, piping, hydrants, sprinklers, panels, detectors and extinguishers.

03 — Installation & Execution

Ring mains, wet risers, pump rooms, sprinkler networks, detection wiring and panel commissioning executed by our supervised site teams.

04 — License & NOC

Documentation, inspection support and follow through with the Fire Brigade until the No Objection Certificate is in the owner's hands.

CORE SYSTEMS

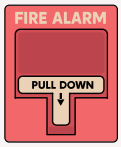

INSTALLED & MAINTAINED

Automatic Fire Hydrant Systems

Automatic Sprinkler Systems

Fire Detection & Suppression Systems

Smoke & Heat Detector Systems

High and Medium Velocity Water Spray Systems

Fire Extinguishers- supply,installation refilling.

Specialised Detection & Suppression.

Data rooms, archives, switch rooms and process areas cannot be protected with water alone. Our product line extends to the systems that detect earlier and suppress without collateral damage.

Analogue Addressable Intelligent Fire Alarm

Device-level addressing and intelligent panels – the exact detector, the exact location, in seconds rather than the zone-level guesswork of conventional systems.

VESDA-- Very Early Smoke Detection

Aspirating detection that samples air continuously andalarms at incipient smoke levels – long before a conventional detector would respond.

CO_2 Flooding System

Total flooding for electrical rooms, transformer and process enclosures where water-based suppression is not an option.

Inert Gas (IG) Flooding System

Clean-agent inert gas suppression for occupied and equipment critical spaces – no residue, no damage to protected assets.

Standards & compliance

DESIGNED TO
SAFER BUILDINGS,
STRONGER TOMORROW.

Systems are designed, installed and tested to the National Building Code and the applicable Indian Standards for fire fighting installations, and to the requirements of the local Fire Brigade –the same authority whose sign-off closes the project. Compliance is treated as the design input, not as a certificate chased at the end.

HOW WE WORK

Six stages. One accountable party.

From site assessment to final certification, we manage every step — with precision, transparency and complete accountability.

01 Survey & Study

Site visit, drawing study, occupancy classification and identification of the statutory requirement that governs the building.

02 Design

Hydraulic calculation, equipment sizing, layout and shop drawings issued for the owner's and the authority's review.

03 Proposal

A transparent bill of quantities make, model and specification stated for every item, with no substitution after order.

04 Supply

Procurement from established manufacturers, material inspected on receipt and stored on site under our custody.

05 Installation

Execution by our own supervised teams, in coordination with the civil, electrical and plumbing contractors on site.

06 Testing & NOC

Pressure testing, commissioning, demonstration to the authority, handover documentation and the Fire Brigade NOC.

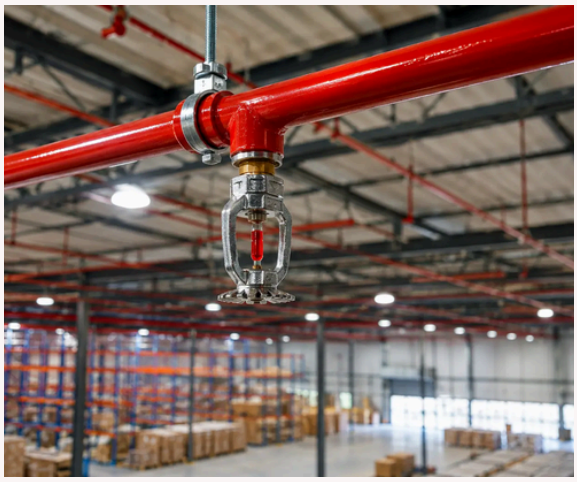

WHY OWNERS RETURN TO US

Repeat mandates → Occupied buildings → Height & complexity

OUR COMMITMENT

Quality, Safety and Long-Term Reliability.

At Shree Siddhivinayak Fire Enterprises we go beyond installation. We build fire protection systems that are reliable, compliant and designed for long-term safety and peace of mind.

WHAT SETS US APART

End-to-End Solutions

From consultation and design to supply, installation, testing and Fire Brigade NOC — we handle it all.

Skilled & Experienced Team

Our team comprises trained and technically qualified professionals with years of industry experience.

QualityProducts &Workmanship

We use certified, reliable materials and follow best practices to ensure durable and efficient systems.

Compliance & Standards

All systems are designed and installed as per the latest fire safety norms and statutory requirements.

On-Time ProjectDelivery

We plan, coordinate and execute with precision — ensuring minimal disruption and timely completion.

Long-Term Support

We provide maintenance and AMC services to keep your systems running at peak performance.

OUR CORE VALUES

- Safety
- Quality
- Reliability
- Customer Satisfaction

SAFE TODAY. SECURE TOMORROW.

RIGHT PROCESS.
RIGHT SOLUTIONS.
LASTING SAFETY.

— OUR PROCESS

From Planning to Protection.

We follow a structured and transparent process to ensure every project is completed with precision, quality and safety — from the initial consultation to long-term support.

Planning & Design

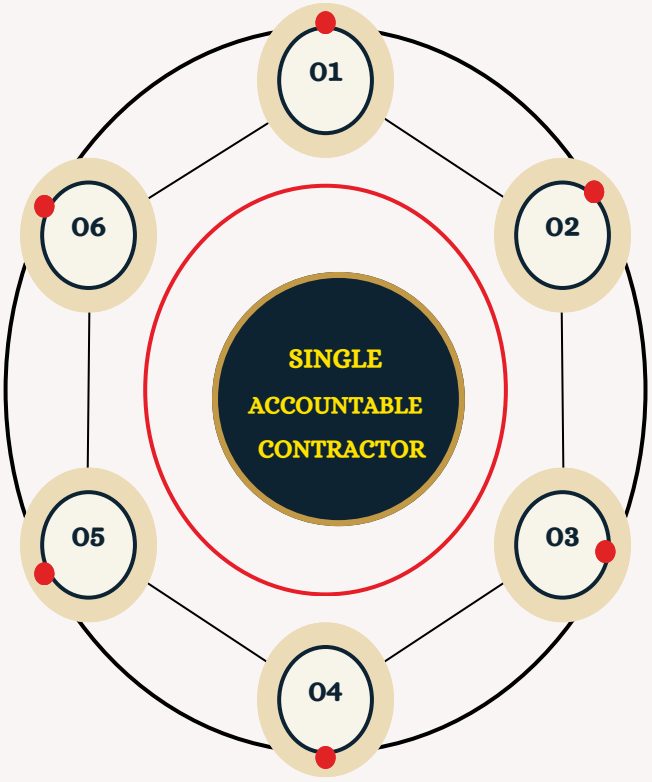

Prepare the right system design and layout as per project requirements.

Consultation

Understand your requirements, site conditions and project needs.

Material Supply

Source and deliver quality products from trusted brands.

ASSESS

PROTECT

Installation

Carry out professional installation by our skilled team.

Maintenance & Support

Provide ongoing support and maintenance for long-term reliability.

Testing & Commissioning

Verify system performance and ensure all parameters are met.

CREDENTIALS AT A GLANCE

Sixty-nine buildings already stand protected.
